APPLIED ENERGY PRODUCTS

Applied Energy Products Ltd (AEP) is a manufacturer of air management, space and water heating products, with three market-leading brands:

Xpelair	-	air management
Creda	-	space heating
Redring	-	water heating

Supplying complete heating, air quality and water solutions for domestic, commercial and industrial applications across a wide variety of UK and international market sectors, Applied Energy Products is backed by the largest after-sales service of any appliance manufacturer in Europe. Customers also enjoy the support of one of the largest service networks in the UK.

Following the introduction of the Decent Homes Standard, the company is committed to helping people in social housing to meet and exceed the Standard by 2010.

Tailored solutions have been developed to meet the needs of the social housing market. Products are thoroughly tested to ensure they perform to specification, and are aesthetically pleasing, energy efficient and economical to run. Every effort is made to develop innovative, easy to install products that give end user satisfaction.

The company also offers installation advice, up to three years' parts and labour guarantee and expert guidance on tailored product solutions and the issues surrounding the Decent Homes Standard.

Applied Energy Products is an ISO accredited company to ISO 9001:2000 and has also achieved the Investors in People status. The company employs around 250 people in the UK, at the manufacturing site at Peterborough and an application design facility at Stoke on Trent. Applied Energy Products is closely involved with the industry's leading professional bodies and trade associations.

XPELAIR

As a market leader with over 40 years' experience in the air management industry, Xpelair offers a comprehensive range of tailored products to fulfil requirements for ventilation in social housing.

The importance of balancing ventilation with heating in a home cannot be underestimated, as condensation caused by an imbalance is one of the major causes of damp. Persistent damp can lead to health problems for occupants and can damage the fabric of the building. Products range from location-specific fans used to ventilate a particular area such as a bathroom or kitchen, to whole house solutions, designed to protect the fabric of the whole building.

Xpelair products are distributed throughout the UK and in over 80 countries worldwide.

CREDA

Creda is dedicated to heating houses to achieve and exceed the Decent Homes Standard. A market leader in the development of electric heating products, Creda has consistently been the first to bring new products and features to the market. All Creda products are designed to meet today's lifestyle needs. Detailed attention has been given to style as well as efficiency and economy.

Ranging from whole house and building heating systems, which are electronically controlled and can heat different rooms to different temperatures, through to single panel heaters that can be installed quickly and easily for instant heat, Creda products are designed to be user friendly and virtually maintenance free.

For bathroom areas, heated towel rails are designed to heat the room as well as the towels, thus eliminating the need for a separate heater.

REDRING

With over 30 years' experience, Redring delivers products to heat and store water for domestic applications. Hot water is an integral part of providing a 'decent' home - whether it's an invigorating shower or hot water for central heating.

Thermostatically controlled showers prevent temperature variations when the water supply pressure changes or when the shower is first switched on, making it ideal for children or the less able. And with solutions such as the combined electric boiler you get the convenience of electronically generated hot water with the familiarity of wet radiator heating systems.

Redring also offers a wide range of technologically advanced specialist heating solutions distributed throughout the UK and worldwide.
